My thanks are due to **PRINCIPAL DR. M.K. PATIL , P.V.P.**

**KAVATHE MAHANKAL** for his encouragement and co-operation during the project work . it gives me a plessure while presenting this report on

## **“MATHEMATICS IN EVERYDAY LIFE “**

A since of prevailing satisfaction and achievement envelopes the whole feeling of completion of the project in the last year 2021-2022 under tge guidance of **PROF. R.A .DUDHAL** I wish to expresas my deep sense of gratitude to his for his valuable guidance and keen interest and co-operation without which it would have been imposible to accomplish this success.

I am also thankful to all teaching and non teaching staff also helped me during comlition of this project.

# 1. Making Routine Budgets

How much should I spend today? When I will be able to buy a new car? Should I save more? How will I be able to pay my EMIs? Such thoughts usually come in our minds. The simple answer to such type of question is maths. We prepare budgets based on simple calculations with the help of simple mathematical concepts. So, we can't say, I am not going to study maths ever! Everything which is going around us is somehow related to maths only.

## Application:

- Basic mathematical operations (addition, subtraction, multiplication, and division)
- Calculation of percentage
- Arithmetic calculations

## 2. Construction Purpose

You know what, maths is the basis of any construction work. A lot of calculations, preparations of budgets, setting targets, estimating the cost, etc., are all done based on maths. If you don't believe, ask any contractor or construction worker, and they will explain as to how important maths is for carrying out all the construction work.

### Application:

- Preparing budgets
- Taking measurements
- Estimating the cost and profit
- Arithmetic calculations
- Geometry
- Calculus and Statistics
- Trigonometry

### 3. Exercising and Training

I should reduce some body fat! Will I be able to achieve my dream body ever? How? When? Will I be able to gain muscles? Here, the simple concept that is followed is maths. Yes! based on simple mathematical concepts, we can answer to above-mentioned questions. We set our routine according to our workout schedule, count the number of repetitions while exercising, etc., just based on maths.

#### **Application:**

- Basic Mathematical Operations (additions, subtraction, multiplication, and division)
- Logical and Analogical Reasoning

## 4. Interior Designing

Interior designing seems to be a fun and interesting career but, do you know the exact reality? A lot of mathematical concepts, calculations, budgets, estimations, targets, etc., are to be followed to excel in this field. Interior designers plan the interiors based on area and volume calculations to calculate and estimate the proper layout of any room or building. Such concepts form an important part of maths.

### Application:

- Geometry
- Ratios and Percentages
- Mathematical Operations
- Calculus and Statistics

## 5. Fashion Designing

Just like the interior designing, maths is also an essential concept of fashion designing. From taking measurements, estimating the quantity and quality of clothes, choosing the color theme, estimating the cost and profit, to produce cloth according to the needs and tastes of the customers, maths is followed at every stage.

### Application:

- Basic Mathematical Operations
- Rations and Percentages
- Geometry

## 6. Shopping at Grocery Stores and Supermarkets

The most obvious place where you would see the application of basic mathematical concepts is your neighbourhood grocery store and supermarket. The schemes like 'Flat 50% off', 'Buy one get one free', etc., are seen on most of the stores. Customers visit the stores, see such schemes, estimate the quantity to be bought, the weight, the price per unit, discount calculations, and finally the total price of the product and buy it. The calculations are done based on basic mathematical concepts. Thus, here also, maths forms an important part of our daily routine.

### **Application:**

- Mathematical Operations
- Ratio and Percentage
- Algebra

## 7. Cooking and Baking

In your kitchen also, the maths is performed. For cooking or baking anything, a series of steps are followed, telling us how much of the quantity to be used for cooking, the proportion of different ingredients, methods of cooking, the cookware to be used, and many more. Such are based on different mathematical concepts. Indulging children in the kitchen while cooking anything, is a fun way to explain maths as well as basic cooking methods.

### Application:

- Mathematical Algorithm
- Mathematical Operations
- Ratios and Proportions

## 8.Sports

Maths improves the cognitive and decision-making skills of a person. Such skills are very important for a sportsperson because by this he can take the right decisions for his team. If a person lacks such abilities, he won't be able to make correct estimations. So, maths also forms an important part of the sports field.

### **Application:**

- Probability
- Mathematical Operations and Algorithm
- Logical Reasoning
- Game Theory

## 9. Management of Time

Now managing time is one of the most difficult tasks which is faced by a lot of people. An individual wants to complete several assignments in a limited time. Not only the management, some people are not even able to read the timings on an analogues clock. Such problems can be solved only by understanding the basic concepts of maths. Maths not only helps us to understand the management of time but also to value it.

### Application:

- Logical Reasoning
- Basic Mathematical Operations
- Reasoning

## 10. Driving

'Speed, Time, and Distance' all these three things are studied in mathematical subjects, which are the basics of driving irrespective of any mode of transportation. Maths helps us to answer the following question;

- How much should be the speed to cover any particular distance?
- How much time would be taken?
- Whether to turn left or right?
- When to stop the car?
- When to increase or decrease the speed?

### Application:

- Logical reasoning
- Numerical Reasoning
- Mathematical Operations

# 11. Automobiles Industry

The different car manufacturing companies produce cars based on the demands of the customers. Every company has its category of cars ranging from microcars to luxuries SUVs. In such companies, basic mathematical operations are being applied to gain knowledge about the different demands of the customers.

## **Application:**

- Mathematical Operations
- Ratios and Proportions
- Statistics
- Geometry
- Algorithm

## 12. Computer Applications

Ever wondered how a computer works? How easily it completes every task in a proper series of action? The simple reason for this is the application of maths. The fields of mathematics and computing intersect both in computer science. The study of computer applications is next to impossible without maths. The concepts like computation, algorithms, and many more forms the base for different computer applications like powerpoint, word, excel, etc. are impossible to run without maths.

### **Applications:**

- Computation
- Algorithm
- Coding Methods
- Cryptography

## 13. Planning a Trip

We all are bored of our monotonous life and we wish to go for long vacations. For this, we have to plan things accordingly. We need to prepare the budget for the trip, the number of days, the destinations, hotels, adjusting our other work accordingly, and many more. Here comes the role of the maths. Basic mathematical concepts and operations are required to be followed to plan a successful trip.

### **Application:**

- Algebra
- Calculus
- Mathematical Operations

## 14. Hospitals

Every Hospital has to make the schedule of the timings of the doctors available, the systematic methods of conducting any major surgery, keeping the records of the patients, records of success rate of surgeries, number of ambulances required, training for the use of medicines to nurses, prescriptions, and scheduling all tasks, etc. All these are done based on Mathematical concepts.

### Application:

- Budgeting
- Operations
- Ratios and Proportions
- Body Mass Index

## 15. Video Games

Playing video games is one of the most favorite entertainment activity done all over the world, irrespective of the fact that whether you are a kid or an adult. Students usually skip their maths classes to play video games. But, do you know here also they are learning maths? Here, they learn about the different steps and techniques to be followed to win any game. Not only while playing, but the engineers who introduce different games for people also follow the different mathematical concepts.

### **Applications:**

- Game Theory
- Probability
- Computation
- Geometry
- Algebra
- Calculus
- Statistics

## 16. Weather Forecasting

The weather forecasting is all done based on the probability concept of maths. Through this, we get to know about the weather conditions like whether it's going to be a sunny day or rainfall will come. So, next time you plan your outing, don't forget to see the weather forecasting.

### Application:

- Probability
- Statistics

## 17. Base of Other Subjects

Though maths is itself a unique subject. But, you would be surprised to know that it forms the base for every subject. The subjects like physics, chemistry, economics, history, accountancy, statistics, in fact, every subject is based upon maths. So, next time you say, "I'm not going to study this maths subject ever!" remember, this subject will not going to leave you ever.

### **Application:**

- Mathematical Operations
- Budgeting
- Operations Research
- Algebra
- Linear Programming
- Algorithm
- Ratios and Proportions

## 18. Music and Dance

Listening to music and dancing is one of the most common hobbies of children. Here also, they learn maths while singing and learning different dance steps. The coordination in any dance can be gained by simple mathematical steps.

### **Application:**

- Mathematical Operations
